SPRING 2006

The Hole-Water Report

Zoar Community Wells a Huge Success

How important is a good supply of water for your community? Not only do you need a constant supply, but you also need it to be safe. Ask the residents of Zoar, Wisconsin and they will tell you how important it is first hand.

The Town of Zoar is a small Native American Community in northern Wisconsin about 16 miles south-east of Antigo and 3 hours straight north of MWP's shop. The town is governed by the Menominee Indian Tribe and has a population of approximately 125 citizens.

The town's well was only producing water at 25gpm, plus the water was non-compliant due to uranium levels.

What the town needed was 200gpm of safe drinkable water but where were they going to get it from.

The geography in the area consists of high elevation, granite bedrock formations. These formations were leaching dangerously high radionuclide levels. Since the elevations of the bedrock valley varied greatly throughout the region, site selection was extremely challenging. Soil borings were completed by USGS at 4 different sites, with depth of bedrock varying from 26' to 75'. Naturally the 75' depth was the best water but it was also the most remote, making access to the site difficult.

Through the assistance of the

Menominee Tribe an access path was improved to provide passage of drilling equipment during early winter months.

MWP drilled a test well and performed test pumping to determine quality. The results were outstanding yielding uranium levels well below the MCL standards. Plus the iron and manganese levels were nearly non-detectable. Based on the results, 3 production wells were designed in the same vicinity nearly 1/2 mile off the road-way. Each well yielded 100 to 150 gpm with minimal hydraulic impact between wells.

In the end, the effort was worth it, the Town had a constant supply of "excellent water".

MWP Sponsors Brat Fry for 2006 NRWA In-Service

Every Year the National Rural Water Association holds an In-Service convention for all the State Rural Water Associations. This year Wisconsin Rural Water Association was the sponsor and the event was held in Milwaukee at Pierre Marquette Park.

As part of the festivities, Municipal Well and Pump & Johnsonville Sausage sponsored the evening "Brat Fry".

The nearly 600 guests experienced the "Taste of Wisconsin" as the beer soaked brats were enjoyed by all. Special thanks goes out to Johnsonville Brats for donating the brats and the

grill. Thanks also goes out to Ray Knudson, Melrose Water Utility, for stepping in at the grill in a time of need.

- 26% of Municipal's sales volume in the past two years has been in Illinois.

- MWP's shop is centrally located to service all clients in Wisconsin & Illinois

Where does MWP do it's work?

"How can Municipal Well & Pump effectively service my account when they are located in south-central Wisconsin?"

This is a common question. Since our corporate office is located in Waupun, WI, you might think we are too far away from your facility.

The fact is we are centrally located with good highway access to service any account in Wisconsin and the Northern 1/2 of Illinois.

Plus, by adding our Vernon Hills, IL office, Municipal now has a Project Manager less than 1 hour away from most Illinois Accounts.

As the map shows, our customer base over the past 2 years stretches from I-80 in Illinois all the way up to the northern most sections of Wisconsin. In fact, we have done work for two clients in the U.P. of Michigan.

Even though the pushpins indicate that nearly 90% of our customers are based in Wisconsin, almost 26% of our sales volume over the past two years has been based in Illinois. That volume is growing and we expect within another year it will push closer to 40% of our total revenue.

Most importantly, no matter where a client is located, they all receive our commitment to: **"Complete Customer Satisfaction"**.

3rd Annual MWP Golf Classic

The weather was perfect (maybe a little warm), the course was in great shape and best of all everyone had a great time.

On Friday, July 28, Municipal Well & Pump hosted the 3rd Annual MWP Golf Classic at the Golf Courses of Lawsonia, in Green Lake, WI.

62 golfers teed it up at 9am competing for the elusive 1st place prize. The competition was fierce as balls flew in all directions, some straighter than others. In the end, no one

won \$10,000, only one team won 1st prize, yet all were smiling.

First place went to the team from Christmas Mountain. There is a rumor that they may have stacked their team just a little.

MWP thanks everyone who was able to come out and enjoy the day. If you are interested in joining us next year, mark your calendar for July 27, 2007 as we expect to see many more of you at the 4th Annual MWP Golf Classic.

New Service Trucks

Just this past week, Municipal Well & Pump took delivery on the first of two new Service Trucks.

The new Ford F550 and service body comes complete with a 5,000 lb, 400 degree rotation crane, built in welding compartment, hydraulic outriggers and a lot more.

By providing our crews with the proper equipment in the field, they are more capable and better equipped to handle projects in the safest and most efficient methods possible.

MWP expects to take delivery on the second new service truck within two months.
